

Career One-Stop Overview of Services

America's Virtual One-Stop consists of these complementary Web-based services offered free to the public by the U.S. Department of Labor. As a family of services, users gain easy access to a comprehensive range of resources and information on career development, training and education, employment, and occupational and economic trends.

America's Job Bank (AJB) www.ajb.dni.us

AJB is the largest and most frequently visited job bank in cyberspace. Visited by more than 10 million job seekers and employers every week, AJB posts job openings nationwide. All different types of jobs, from sales clerks to information technology positions, are listed by major corporations and small businesses. Both employers wishing to list their openings, and job seekers looking for their next position will find this service useful.

America's Career InfoNet (ACINET) www.acinet.org ACINET accesses national and state-level occupational and economic trends data compiled by the National and State Occupational Information Coordinating Committees. Both job seekers and employers can use this service to find out about job market and employment trends such as what occupations are growing or shrinking, which labor markets are strong or weak, average wages and salaries paid by type of occupation, or what kind of training is needed to qualify for various jobs.

America's Service Locator (www.servicelocator.org) (ASL) - This webpage allows our customers to find the nearest physical site at which a service they seek is provided. The user can enter his or her zip code and then describe the kind of service they are interested in (or pick from a pre-established list of common services, e.g., training, job search assistance, counseling, child care, etc.), and the system will identify and display information about the nearest provider (physical service delivery point) to that customer's zip code that offers that service. This is a GIS system, and hence will also offer the customer the ability to print a map that shows point to point directions for getting from their address to the address of the service provider, including the use of public transportation.
